LICENSE: Open-Source Browser-Based AI Agent Orchestration Framework

This framework introduces the first open-source, browser-native, tab-level AI agent orchestration model for contextual real-time optimization and intelligent suggestion workflows.

This architecture was first introduced and publicly documented by Oscar Schreyer via optimando.ai in 2025 under a timestamped, open license.

Any derivative use of the core orchestration principle must include visible and proper attribution in accordance with the license terms.

YOU ARE FREE TO:

- Share - Copy and redistribute the material in any medium or format

- Adapt - Remix, transform, and build upon the material for any purpose, including commercial use

UNDER THE FOLLOWING TERMS:

Attribution (User-Facing Required)

You must provide clear and visible credit to:

optimando.ai - AI Automation, with a clickable link to https://optimando.ai

This attribution must appear directly in the main user interface of any product, software, or system that uses, displays, or integrates this work.

Permissible locations include:

- A persistent footer, header, or visibly embedded UI element during regular use

- Next to download links or primary integration points on distribution pages

Prohibited attribution placements include:

- About dialogs, expandable UI elements, or hidden modals

- Documentation files, tooltips, code comments, metadata, or backend-only interfaces

- Any location not immediately visible to the end user during typical usage

Indication of Changes

If you remix, transform, or build upon this work, you must clearly indicate that changes were made, and provide a reference and link to the original source.

ShareAlike

If you distribute derivative works, you must license them under the same license:

Creative Commons Attribution-ShareAlike 4.0 International (CC BY-SA 4.0)

This ensures that modifications and extensions remain open and freely accessible.

No Additional Restrictions

You may not apply legal terms or technical measures (e.g., DRM, locked systems) that legally or practically restrict others from exercising the rights granted by this license.

ETHICAL ATTRIBUTION POLICY FOR COMMERCIAL USE

As this architecture constitutes timestamped open-source prior art,

all users-especially commercial, institutional, or enterprise adopters-are morally expected to respect visible authorship.

Failure to do so undermines open collaboration and may expose violators to reputational risk.

Hiding attribution from the user interface, even if technically compliant, is contrary to the spirit of open innovation.

COMMERCIAL LICENSING

Use in closed-source, proprietary, white-label, or enterprise environments requires a separate commercial license.
